

Why Green Remodeling?

Posted on Sep 19, Posted by [GH](#) Category [Los Angeles](#)

Why Green Remodeling?

Cost Saving-Energy efficient and water saving designs and products reduce monthly utility bills. The most efficient new appliances typically use 50% less energy than the most wasteful models. Choosing a high-efficiency washing machine can save up to \$90 on energy bills and 6,000 gallons of water, every year.

Health -Health-focused designs maximize fresh air and natural light, while reducing the risk of injury and asthma. Using green and low-toxic materials and good ventilation techniques can help to prevent problems like molds, allergens and poor air quality that causes many health problems.

Beauty & Comfort -Natural materials, high quality lighting, and good design details make for pleasing spaces.

Added Value- Universal designed homes that welcome various ages and abilities are

marketable to a larger population. Green elements also represent value: 96% home buyer said they are willing to pay more for a home with green features.

Ecological Benefit-By making your home remodeling green, you can be more resource efficient, minimize waste, and recycle what's left over to reduce the amount of materials ending up in landfills. choosing environmentally responsible products, you can protect forests, wildlife, and air and water quality.
